## ug2pdf

ug2pdf is an integrated plot utility within NX. It allows the creation of pdf files direct from NX for the purposes of archival, collaboration (internal and external), documentation, etc.

### Benefits

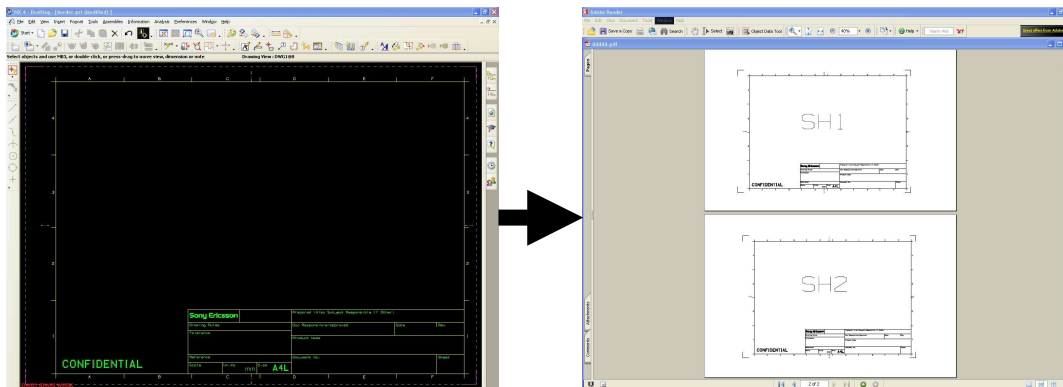

- Capture single or multiple drawing sheets in one pdf.
- Eliminate tracking and locating intermediate files.
- Consistent pdf creation across the organization.
- **The simplest, most cost efficient method of creating pdf files from NX!**

### Features and Functions

- Select individual or multiple drawing sheets for a single pdf.
- Automatically sizes the pdf to the drawing sheet.
- Supports color or monochrome.
- Plot drawing sheets or current display.
- Flexible naming format that can be based on Team Center part numbers allowing immediate archival within Team Center of pdf file. No renaming required!
- **Coming Soon: Incorporate multiple pdf files into one pdf file. Incorporate non-NX with NX files into single pdf.**

### System Requirements

- UG v18 – NX4
- Ghostscript or Adobe Acrobat
- Windows versions that support NX (Contact us for UNIX requirements.)
